

Nihon Purple Service Features

Data Security Service (Brand name)

We are a contract company which protects both your data and the environment.

The more your information increases, the greater management expense becomes.

Large amounts of documents need to be kept in a modern office. Expensive personnel costs are used up just to shred confidential documents. Have you ever thought how much rubbish your company discards everyday?

You can outsource to us without wasting your valuable time and space. We provide a total service of safekeeping, management, and destruction of documents and data.

Nihon Purple is a company that will protect your information and the environment, and rationalize your business performance.

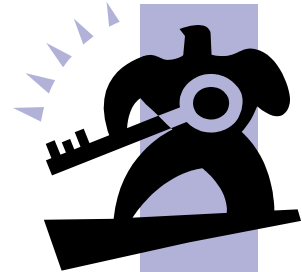

The three reasons for outsourcing to us:

Security

All personnel who carry and protect your data are our own, identity-card carrying staff. Our transport vehicles have alarm systems the same as those installed in armored security vans.

Our secured facilities are completely sealed to safe keep your business information. We never outsource our operations to a third party.

Environment-friendly

We believe that paper is one of the most important resources on earth. We process your paper, with consideration to its fiber condition, into an indecipherable state, and recycle 99% into photocopier paper.

All our branches have passed ISO 14001 Standards. Our recycling service contributes to your company environmental measures as do our environmentally-friendly vehicles and center facilities.

Efficiency

The business districts in Tokyo still boast the highest rent in the world. The average amount of documents to be stored in an office can amount to several card-board boxes per employee. The expenses for information protection in the office can cost hundred of thousands of yen a year.

Are there any employees in your office shredding all day long during the personnel revisions and near the end of fiscal term?

In a large company shredding time and costs are too much to ignore.

Leave it to us and you can reduce costs and improve productivity by using open space and personnel effectively.

Why use Nihon Purple?

Environment

Waste disposal problems in Tokyo

Japanese environmental laws are becoming stricter every year. Especially in Tokyo, where businesses create 60% of waste, there are much stricter industrial waste disposal restrictions compared to the other major cities around the world.

Refuse incinerator plants are located in urban areas of Tokyo. The U.S.A. handles refuse mainly by landfill, and the European countries have their waste disposal facilities in the suburbs.

As a consequence, public waste disposal facilities are not allowed to accept paper waste from the businesses. In addition, there is great public pressure on businesses to reduce waste that creates dioxin emissions.

Tokyo's public officials require companies that create large quantities of shredded paper to reduce and recycle their waste. If businesses can not comply, Tokyo city applies penalties such as termination of refuse collection services.

Japanese distribution problem

The special Japanese distribution system is another problem for foreign companies. From the collection of used paper to the recycling into new paper, various commission agencies become involved. This unique industry was constituted about 200 years ago and is still used today.

This long experience has made Japan the No.1 paper recycling country in the world. On the other hand, the distribution channel is so complicated and takes so long that personal or confidential information from the companies is often discharged.

Data Management

In Japan, there seemed to be little industrial espionage or few employees who took data out of their own companies. This was due to the lifetime employment system and the unique relationship between companies. However, as the western companies have been expanding their market into Japan, the collapsed lifetime employment system has led the personnel to become mobile, and the information network has spread from house to house. Information leakage problems have become much closer to the business administrators and citizens.

At the same time, leaving judgment of the data value to normal employees is unreasonable. Therefore, it is common that document shredding is left to temporary employees, while the regular employees are concentrating on the core business.

Manpower dispatching is one of the main services from the outsourcing industry. However, using outsourcing for confidential information enhances deskwork efficiency as well as data protection. The most of all, the total cost will be greatly reduced when hiring temporary employees. As our service advocates the confidential protection, our employee training and hardware reliability are world-class. It is much more efficient than taking your own measures for information management.

One of our customers, U.S.A. based company, passes its security inspection every year. A world-class CPU company carries out the inspection. This is proof our security and reliability is second to none.

Services from Nihon Purple

Data Destruction Service

We destroy and discard your confidential documents and data after transport under strict supervision. We have a reliable staff and security system. We secure and recycle your documents safely and easily.

Our service provides you with expunction and recycling of your documents and we are an environmentally-friendly company.

Various Tools

Data Protector

[Safe special recovery tool]

You don't need to separate paper according to its type for recycling. Also you can discard it with paper fillings and paper clips. Size is according to the office space and document volume.

The protector is a sealed box with a key.

We replace the box when it becomes full, or on a prescribed day. Therefore the box keeps your data confidential even in your building.

Data Protector SS

[For data recorded media]

This is a confidential expunction service for information data recording media.

We disintegrate and thermal recycle your magnetic tapes, CD-ROMs, and magnetic cards.

Data Protector SP

[For storage boxes]

You can keep document storage boxes safe when organizing or moving office. You can prevent disposal of the boxes by mistake.

Data Security Pack

[Japan]

Our data expunction service is available all over Japan. Just send us your documents from your branch and regional offices using our specially insured boxes.

Data Safekeeping Service

This is a safekeeping service for your data that is space consuming and troublesome. We take custody of the documents that you don't need everyday, and we backup the data in case of disaster. We deliver them on the next day with a single telephone call. We can provide you with services ranging from information custody and safekeeping to a completely secure expunction service.

Supplying Products

You can utilize your own discharged documents as recycled paper. To help resource recycling, we offer our own brand recycle paper made from the discarded documents.

Facilities for data protection

Final Center

【Terminal treatment factory for confidential documents and data recording media】

We collect the data and documents in our data protectors and remove them to the center still locked. We destroy the data in a short time inside the facility, which has heavy 24 hour security.

We extract any non-paper objects from the documents and shred with a special machine which breaks them into small chips. We send the chips to an affiliated paper company and recycle them into paper.

For about the data recording media, we also shred them into 1cm pieces and thermal recycle them as fuel for our affiliated factories and as an ingredient for cement.

DTS Center

[Document trunkroom service center]

The premises are guarded with a strict security system and the gates and doorways are completely guarded with a 24 hour security system. We control the labels on the special boxes and the storage rooms with computers, which gives you speedy browsing and delivery. The racks are large electrical control movable shelves and they are protected against earthquakes and other disasters.
